

AIDente Pro Press Kit

The Ultimate Charge Limiter App for MacBooks

AppHouseKitchen is proud to announce AIDente Pro, the all-in-one charge limiter designed to help extend the life of your MacBook's battery. AIDente Pro offers a suite of features that help maintain optimal battery health and performance, while ensuring environmental sustainability and reducing the need for early battery replacements.

Why AIDente Pro?

Lithium-ion batteries, like those in MacBooks, perform best when operated between 20% and 80%. Consistently keeping your battery at 100% can significantly shorten its lifespan, leading to increased costs and a negative environmental impact. AIDente Pro allows users to set a healthy charging limit and offers additional features such as Heat Protection, Sailing Mode, and Calibration Mode to further promote battery longevity. To learn more about maintaining battery health, check out this Battery University [article](#).

Key Features

We are continuously improving AIDente. This includes adding more features and improving existing features.

Currently available features of AIDente Pro:

- Charge Limiter
- Discharge
- Automatic Discharge
- Discharge in Clamshell Mode
- Control MagSafe LED

About AppHouseKitchen

AppHouseKitchen is a young software company based near Vienna, Austria, and was founded by two students David Wernhart and Matthias Kerbl. "After experiencing battery failure in one of our MacBooks just a year into its life, we recognized the need for a solution to prolong battery health and started developing AIDente."
